

### Extensions

- **Color Management**  
Large scale of enhancements concerning Color Management. When opening a file, HelioCom will check if the original file was changed. If so, the Used Picture dialog will open automatically.  
*See Illustration*
- **Spot colors in TIFF channels**  
The Place Picture function will now try to recognize any spot colors when placing a TIFF file.
- **New function: Select Invers**  
This function inverts the selection on all visible and unlocked objects: All selected objects will be deselected, and vice versa.
- **Further new features**  
See „Final Release Notes“ on Install CD.
