

HelioCom V 9.6

June 2010

New functions

- **Step & Repeat of placed PDF files**
Ready-to-print one-up PDF files can be stepped immediately before exporting to Tif. No conversion into native ArtPro format is required anymore. This procedure comprises some limitations:
 - Only Rotations of 0, 90, 180 und 270 degrees are allowed. Cutting is not possible.
 - Separations used in the PDF must be identical with separations of the Artpro file.
 - Overprints of CMYK-separations are not factored in.
- **Separated preview of placed PDF files**
It is possible to generate a preview of a placed PDF from within HelioCom.
- **Active Dock icon**
The Dock icon displays the actual progress of the TIFF data generation.

Software compatibility

Mac OSX 10.4 / 10.5 / 10.6
