

Software Information

HelioDisk V 3.05

New features

- **Scanning for fast forward information**
TIFF engraving data can be scanned for blank areas to generate fast forward information for the Helio. This function is of great value if a 3rd party cylinder layout station does not provide fast forward information.
- **HelioCom gravure export can be parametrized**
Settings for output resolution and oversampling of HelioCom (Version 8.1 and newer) can be controlled via the job ticket.
- **Parametrizing of HQH**
A job based parametrization of HQH (Version 3.2 and higher) can be performed by means of the job ticket.
- **Face width and cylinder name can be set independantly for each color**
- **Further new features and extensions**
See „Release Notes“ file.

Software

Mac OS X 10.3.9
