

HelioDisk V 5.1

May 2009

New functions

- **New look**
See screenshot above.
- **Central Ini-file**
Several HelioDisk applications may work now with one INI-file. Therefore the Ini-file can be stored on a server and a reference (Alias- / Linkfile) to the INI-file can be created in the application folder.
- **Engraving time for sequences available**
In addition to the engraving time of single separations the total engraving time of sequences can be calculated now inside the window „Engraving time“.
- **Automatic wall width control for XtremeEngraving**
Parameters for the automatic wall width control with XtremeEngraving can be set now in HelioDisk. (This function requires an actual software at the HelioKlischograph.)
- **Helical engraving for XtremeEngraving**
For XtremeEngraving the engraving mode „Helical engraving“ can be parametrized now. (This function requires an actual software at the HelioKlischograph.)

- **New function „TIFF-Link“**
TIFF-full-ups provided by 3rd party frontends can now be linked to job tickets in a more convenient way. Fastforward- and histogram information will be added automatically.
- **Further new features and extensions**
See „Release Notes“ file.

Software compatibility

Mac OSX 10.4 / 10.5
Win 2000 (SP 6a), Win XP (SP 3)
