

## HelioDisk V 5.2

December 2009

### New functions

- TIFF-Link Preferences**  
 Preference settings were added for „TIFF-Link“, which allow to assign individual workflows. In respect of the source system of the TIFF engraving data (Photoshop, Artpro, Other) the orientation (turning, mirroring) will be set as well as fastforward- and histogram information will be generated.
- Preferences for TIFF resolution / oversampling**  
 Global values for TIFF resolution as well as oversampling can be set in the preferences.
- Preferences for XtremeEngraving tetcut values**  
 For each screen of XtremeEngraving an EPX file can be assigned in the preferences dialogue. Testcut values will be set accordingly.

- **Twain identifier**  
A checkbox was added to the window „engraving time“. Here the operator indicates that a color should be engraved by a K500 Twain. In future this identifier will be checked by the control computer of the AutoCon line. Thus the control computer will preferably assign the color to a K500 Twain.
- **TIFF-Preview**  
The TIFF preview was extended by a zoom and pan function.
- **Further new features and extensions**  
See „Release Notes“ file.

## **Software compatibility**

Mac OSX 10.4 / 10.5 / 10.6  
Win 2000 (SP 6a), Win XP (SP 3)  
HelioCom V 8.6  
K500 Classic V 2.2; K500 NT V 3.0; K500 G3 V 3.1  
K50 V 1.0; K5 V 1.0  
K405 Version V. 3.21; Compact V 2.00; TUK V 2.00
