Software Information

New functionalities :

- Exclusive from HELL : Follow-up application of ShiraLinkPro and Shira Dual Rip
- Windows 2000 (SP3) and Windows XP / 2003 (SP1) tested version
- USB dongle (HASP) support
- Updated and integrated 'Global Graphics' RIP
- RIP : Expanded, adjustable 'pre-flight' options
- RIP : PDF 'overprint' instructions that can be enabled or disabled
- RIP : Adjustable widening of non-gravure-printable 'hairlines'
- RIP: Improved recognition of PDF color vignettes
- Newly organized 'Toolbox' specially optimized for engraving workflows
- New data format option : Engraving TIFF LZW (see below)

HelioLinkPro Version 4.1

Engraving LZW option

Now that the patents for LZW have expired, it is possible to generate TIFF LZW compressed data with HelioLinkPro which can of course then be directly engraved with GipsyNT. LZW is an absolutely lossless form of data compression that can reduce file sizes by up to 70%, depending on the page content. This saves considerable storage capacity on the engraving server and increases network transfer speeds accordingly.

NB :

Before the HLP installation, old ShiraLink and Rip versions must be uninstalled !
HASP updates also available on the installation CD
