

Software Information

K500 Control2 V 2.1

New features

- **CellEye**
CellEye is a new testcut process for Helioklischograph systems that ensures outstanding repeat accuracy for packaging gravure cylinders. CellEye calculates the actual volume of the engraving cell, factoring in the real stylus angle and stylus wear. It compensates for variations in the engraving copper that can occur from cylinder to cylinder. CellEye is also the first system to enable users to control the highlights, midtones and shadows separately from each other.
- **Save stylus angle in Touchmemory**
The stylus angle can be transmitted to the Touchmemory of the engraving head of a K500 and is from then on factored in on all machines equipped with CellEye. (Requires Touchmemory Version 14)
- **XtremeEngraving**
Enhancements affecting seamless engraving, edge quality and unwanted patterning.
- **New language versions**
 - Portugiesisch
 - Russisch
- **Bug fixing**
Several bugs have been fixed.
See „Release_Notes“ file.

Compatibility

This version is compatible with:

- HelioCom V. 8.1
- HelioDisk V. 4.1
