

New Features

- **Storing of camera images**
New function for K500s which are equipped with CellGuard or HandyCam: The testcut cell images are stored now in the job ticket file. These can be displayed and printed by Helio-Disk Version 2.33. Thus an engraving log can be generated easily.

See illustration

- **Optimization of sequences**
Several operating as well as machine sequences have been optimized.
- **Error messages**
Some error messages were displayed as character and number codes only. A text will be displayed instead of this now.
- **Bug fixing**
Several bugs have been fixed. (See Read.me file.)

Hardware

No additional requirements.

Software

HelioDisk version 2.33 or later is required to display and print testcut cell images.
