New Features

- **Running time meter for HelioSprint engraving system and stylus**
The running time for a HelioSprint system is now recorded continuously and is saved in the HelioSprint system's touch memory.
The stylus running time is recorded by means of a separate machine-specific meter. The meter can be reset manually every time the stylus is changed.
See Figure
- **Screen 30**
Screen 30 is available from this version onwards (requires HelioDisk Version 2.33a)
- **Improved handling**
Improvements have been made to the machine's handling, e.g. testcuts perform without amplifier files, cylinders unload without appropriate job ticket, engraving current default is checked for validity.
- **Enhanced reliability**
A number of improvements have been made to increase the machine's reliability during operation.

Hardware requirements

Requirements are no greater.

Software requirements

HelioDisk Version 2.33
