

New Features

- **High Quality Hinting**
As of this version data can be engraved that before has been processed by High Quality Hinting (HQH). The HQH software examines engraving data for fine lines and texts and optimizes these elements automatically according to preset criteria. The software's intelligent character recognition guarantees that the letters' characteristics are preserved.
- **Windows 2000**
As of this version operation under Windows 2000 is possible, too.
- **Enhanced reliability**
Before job parameters are sent to the machine the engraving amplifier is adjusted.
- **Bug fixing**
Improvements related to „Automatic Testcut“ and „Remote Operation“.
